BEFORE purchasing a toilet.

Replace Your Toilet Today

Tucson Water offers a toilet rebate program to encourage and assist commercial & multi-family customers who wish to purchase and install new, high-efficiency toilet fixtures. Replacing older 3.5 gallons per flush or greater toilets with high-efficiency models is a cost-effective way to conserve water and save money.

HIGH-EFFICIENCY TOILET

What Toilets Qualify?

Only WaterSense certified high-efficiency tank-type toilets (HET) or flushometer valve/bowl combinations rated by Maximum Performance (MaP) Testing at 800 grams or more qualify for the rebate. HETs use 1.28 gallons per flush or less. Fixtures replaced as part of a general construction permit (such as for a structural change or alteration) do not qualify for the rebate.

Look for the Logo

Look for the WaterSense logo to select a tank-type toilet that qualifies for the rebate and meets water efficiency and performance standards. A list of approved tank-type toilets can be found on the Environmental Protection Agency's (EPA) website at epa.gov/WaterSense/product_search.html or check the list of eligible flushometer valve/bowl combinations listed on MaP's website at map-testing.com/downloads.html

Do You Qualify?

The toilet rebate program is for Tucson Water commercial & multi-family customers whose buildings were constructed prior to 1991 and fitted with toilets that use 3.5 gallons per flush or more. For additional requirements, review the Rebate Program Policy on the back of the rebate application.

How Much is the Rebate?

Tucson Water customers can receive \$75 per tank-type toilet and \$150 per flushometer valve/bowl combination. There is no limit on the number of fixtures replaced per property.

Did You Know?

Advancements have allowed toilets to use 1.28 gallons per flush or less while still providing equal or superior performance. This is 20% less water than the current federal standard of 1.6 gallons per flush. The WaterSense label is used on toilets that are independently certified to meet rigorous criteria for both performance and efficiency. Only water-saving toilets that complete the certification process can earn the WaterSense label.

Nationally, if all old, inefficient toilets in the United States were replaced with WaterSense labeled models, we could save 520 billion gallons of water per year.
